Job Description - Senior Backend Infrastructure Lead

Position Title: Senior Backend Infrastructure Lead | Document ID: jd_backend_lead_2026

Department: Engineering Platform Team | Location: Hybrid / Remote

Job Summary: We are seeking an accomplished Senior Backend Infrastructure Lead to spearhead our distributed microservices platform, cloud containerization, and data infrastructure.

Key Responsibilities:

- Architect and scale high-performance REST APIs and background services using Python and FastAPI.

- Deploy, manage, and scale microservices running on Kubernetes clusters and Docker containers.

- Oversee relational database architecture in PostgreSQL, ensuring optimal indexing, replication, and query performance.

Required Qualifications:

- 4+ years of professional backend engineering experience with Python.

- Hands-on proficiency with Docker, Kubernetes, and cloud orchestration.

- Strong experience with relational databases (PostgreSQL) and caching systems (Redis).

Preferred Skills: Experience with Kafka event streaming and LangChain agentic systems.
